

AUSTRALIAN DESIGNED

Pioneering the Path Beyond Net-Zero Bill

Redx AI Energy Plan*

Redx Technology Australia Pty Ltd

Redx is a proud Australian company that brings game-changing, world-first patented technologies to revolutionise home energy solutions. We're honoured to be recognised as one of the renewable equipment suppliers listed by the Australian government (Austrade). At Redx, We specialise in smart solar battery and inverter system design to help Australian households achieve zero energy bills and maintain power during outages.

Redx AI Energy Plan

What is Redx AI?

Redx AI is an AI-powered software designed to maximize your energy savings by intelligently managing how and when you use stored battery energy. It predicts electricity prices, energy demand, weather, and solar generation to create smart schedules that save money. The system continuously adapts to real-time changes, ensuring the most efficient use of energy for maximum savings.

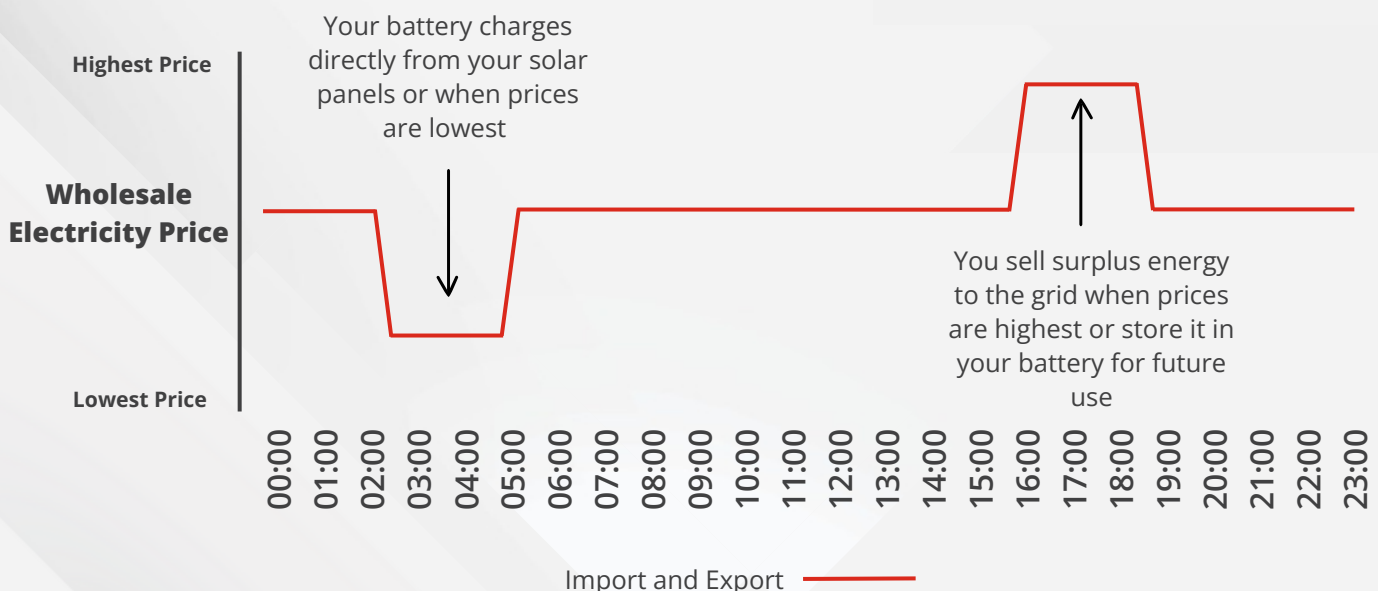

The Redx AI Energy Plan works seamlessly with your Redx battery and solar panels to optimize energy cost savings after switching to a wholesale electricity tariff through Redx's partner, LocalVolts.

How Can You Save?

or Even Get Paid

Powered by advanced AI, the Redx algorithm forecasts your energy consumption, solar generation, and wholesale electricity prices 24 hours ahead. This ensures your battery is always prepared and ready for action. By charging when energy is cheapest—whether from excess solar power or low wholesale rates—and discharging when prices peak, the AI-driven Redx system helps you save more and earn extra through feed-in tariffs.

Redx AI Energy Plan

That's not all, Redx AI also considers ...

Solar Generation

Redx AI monitors your solar energy production to ensure efficient use and storage for maximum savings.

Energy Demand

It analyzes your household's energy needs to prioritize when and how to use stored energy effectively.

Weather Conditions

It uses weather forecast to optimize energy usage and prepare for days with lower solar output.

What You Gain?

Beyond Zero Energy Bill

By smartly managing energy usage and optimization, Redx AI significantly reduces electricity costs, and you can achieve maximum saving

Shorter Payback Period

Maximizes savings quickly (with optimized energy use and lower electricity bills), helping you recover your battery investment faster.

Reliable Power Source

Redx AI intelligently manages your battery to ensure you have power whenever you need it, even during grid outages.

Continues Improvement

Your investment keeps getting better over time. Our advanced AI system is continuously update for free, ensuring that the energy management improves as technology evolves.

What You Need?

Equipment

Solar panel and Redx battery

Average Consumption

Maximum 40kWh of average daily electricity consumption

Grid Electricity

Receive grid electricity from Localvolts (Wholesale Electricity Provider)

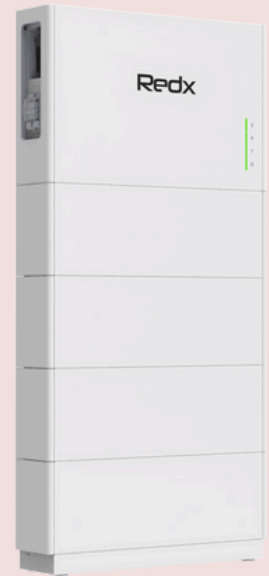

Redx AI Energy Plan Packages

If You Don't Have Solar Panel...

Package 1: RX-7000Plus Smart Hybrid Battery + Solar Panels

This package includes high-efficiency solar panel and the **RX-7000Plus** battery that is an all-in-one hybrid smart battery designed to achieve the highest efficiency using Redx patented Single Stage Buck-Boost Inverter with Step Modulation.

- 10.5kW solar panel
- 7kW solar battery inverter
- 13.3kWh of battery storage

15 Years
Warranty

Backup & Off-
Grid System

IP65 for Outdoor
Installation

Fanless Design

Plug-and-Play with
Wiring-less
Connection

VPP Ready

Single-Stage
Inverter Technology

Local Australian
Support Hotline

If You Have Solar Panel...

Package 2: RX-5000AC AC-Coupled Battery

This package includes **RX-5000AC** battery with ac-coupled battery inverter designed to achieve the highest efficiency using Redx patented Single Stage Buck-Boost Inverter with Step Modulation.

- 5kW solar battery inverter
- 10/15/...kWh of battery storage

(Minimum 6.6KW solar panel required)

10 Years
Warranty

Reliable
Backup

Off-Grid System

AC-Coupled Inverter

Quick Installation

Cloud Monitoring
